👤 PROFILE

👋 About Me

Hi, I'm Yunus, a **Backend Developer** focused on building clean, scalable, and maintainable applications using **C# and the .NET ecosystem**.

My main area of expertise is **Backend Development**, particularly designing and developing **RESTful APIs**, working with **databases and SQL**, and building reliable application architectures using technologies such as **.NET, Entity Framework, Microsoft SQL Server, and Git**.

I have experience working with core backend concepts including **Authentication, Authorization, API development, Object-Relational Mapping (ORM), debugging, testing, scalability, and design patterns**.

What motivates me most is understanding how technologies work beyond the surface and applying them to real-world problems. I regularly explore technologies and development practices around **Docker, Cloud Computing, CI/CD, DevOps, and software architecture** to improve both development efficiency and application reliability.

I enjoy solving complex technical problems, improving existing systems, and continuously developing my skills as a software engineer.

🚀 Experience & Mindset

Over the past few years, I've worked across different stages of the **software development lifecycle**, including feature development, API development, database operations, debugging, testing, deployment, and maintaining applications in production.

I have worked with **C#, .NET, RESTful APIs, SQL, Microsoft SQL Server, Entity Framework, Git, Docker, and backend architectures**, with a strong focus on writing maintainable and scalable software.

I have also explored infrastructure and **DevOps practices**, including **Continuous Integration, Continuous Delivery, Docker, Jenkins, and Amazon Web Services (AWS EC2)**. My goal has never been simply to learn new tools, but to understand how they can improve deployment processes, development workflows, scalability, and system reliability. I'm comfortable working in **Agile development environments**, collaborating with developers across different parts of a project, participating in development cycles and sprints, and solving technical problems as part of a team.

Alongside technical skills, I value **communication, collaboration, attention to detail, and problem solving**. I believe strong software engineering is not only about writing code, but also about understanding business requirements, communicating effectively, and building solutions that can evolve over time.

I also enjoy sharing what I learn. I've published technical content on Medium and continue exploring topics around **.NET, backend engineering, APIs, cloud technologies, and software architecture**.

📁 WORK EXPERIENCE

08/2022 –
present

MagiClick

Software Development Specialist (4 Year 1 Months)

I supported the **IKEA** 🏠 project.

- At MagiClick (August 2022 – Present), I worked as a Software Development Specialist supporting the IKEA project. I played a key role in transitioning the application from a monolithic architecture to a microservices-based structure. I collaborated closely with the IKEA team to ensure continuous communication and smooth implementation.
- **Microservices Communication:** Facilitated communication between microservices using RabbitMQ.
- **Clean and Secure Code:** Maintained clean and secure coding practices, conducted code reviews, and enforced best practices for each pull request.
- **Key Technologies:** Microservices Architecture, Unit Testing (xUnit, Moq), Azure DevOps, RabbitMQ, Elasticsearch, NHibernate, Docker, CI/CD (Azure Pipelines), MediatR, SOAP Services."

I also supported the project **Opet** 🏠 .

This project is the most famous Gas Station In Turkey

Technologies I've learned and used at this company

- I develop the Nestle automatic communications with the api and mobile application, and some reward system in this feature
- I also participated in various tasks such as development and server maintenance in this project.

06/2021 –
08/2022

Faha Software

Backend Developer (1 Year 3 Months)

I served as a Backend Developer on finance-related projects such as 'Hisse Sinyal' and 'Borsa Aktif'. I improved the WebSocket infrastructure for 'Fahax', a crypto application I developed entirely.

I leveraged technologies like **SignalR, GitHub, Redis, Hangfire, Health Checks, Unit Testing, N-Tier Architecture, Docker, EF Core, MSSQL, and Dapper**. We utilized Windows Server for deployment. During this period, I also implemented **CQRS, the Mediator Pattern, Onion Architecture, and Asynchronous Programming** techniques to ensure clean, maintainable, and scalable solutions.

We used **Windows Server** in the publishing part of the project.

While developing this Project, I took on the task of making the project progress smoothly in line with the goals we set, and we worked in a coordinated manner with my teammates.

Also I used **CQRS, Mediator Pattern, Onion Architecture and Asynchronous Programming**

- Fahax
- **Hisse Sinyal** 
- Borsa Aktif
- Crm For Faha Software
- IYS Integration
- API Health Check for Apps

03/2020 –
05/2021

Tamly

Backend Developer (1 Year 3 Months)

While I was here, I mostly worked on Web APIs in 2 projects and used technologies such as N-Tier Architecture, EF Core, FluentValidation.

- MakasApp > <https://apps.apple.com/az/app/makasapp/id1551485159>
- Crm Project For MakasApp

EDUCATION

09/2017 –
06/2021

High School

Profilo Vocational and Technical Anatolian (Database Programming)

Istanbul

PROJECTS

present

IKEA

<https://www.ikea.com.tr>

Opet

<https://apps.apple.com/tr/app/opet/id390624881?l=tr>

Application of the biggest gas station company in turkey

Hisse Sinyal

<https://apps.apple.com/tr/app/hisse-sinyal/id1547821353?l=tr>

Turkey Stock App

Westartic E-Commerce

Step By Cv

Amiral Service

Melek Ozdemir Wellness

West Ware Studio

Hergele App

<https://apps.apple.com/us/app/hergele-app/id1518215426>

This application allows you to instantly see the location of the scooters in Istanbul and to unlock and manage them.

MakasApp

<https://apps.apple.com/tr/app/makasapp/id1551485159>

You can create appointment for the haircut or personel care

Crypto Web App Project (Angular & .NET 7)

<https://github.com/YunusOzdemirr/crypto-project-net7-angular>

This project is builded with SignalR

Video Upload Api

<https://github.com/YunusOzdemirr/Video-Upload-Api>

This project is can be use for video or photo upload api

**FREELANCE****Webbilir / webbilir.com****Backend Developer**

I supported crm projects as a part time in this company.

Hergele Electronic Scooters / Hergele.co**Backend Developer**

I supported scooter connection with the server as a freelance in this company.

EsitCv / esitcv.com**Backend Developer**

I supported backend as a freelance in this company.

**LANGUAGES**

- Turkish (native)
